

## 6.033 Spring 2015

### DP Presentation Assignment

*Due between 4/13 and 4/24 — you will schedule your presentation with your recitation instructor*

Since the DP proposal assignment, two things have happened:

1. You've received feedback on your design from your recitation instructor (if you haven't, you will by April 6th)
2. We've released two new requirements to the design project

As a result, your design has probably changed a bit since the proposal. Additionally, you should have started thinking about how to evaluate your design.

The design project presentation is an opportunity for you to receive feedback on your updated design while also practicing your oral communication skills. Your presentation should begin with a brief summary of your system and the key design decisions, but you do **not** need to explain the problem you're solving (your audience is the 6.033 staff, and we are all, at this point, very familiar with the problem you're solving).

Once you have summarized your design, the rest of your presentation should focus on the things that have changed since your proposal. This may include:

- Changes or modifications you've made to your design as a response to feedback on the proposal
- An explanation of any aspects of your design that were incomplete as of the proposal.
- Changes or modifications you've made to your design to handle our new requirements.
- A brief discussion of how you intend to evaluate your design (you do **not** need to present an actual evaluation).

In general, you should view the presentation as an opportunity to get the feedback that would be the most useful to you. Additional guidelines:

- Presentations should be 10-15 minutes (absolutely no more than 15 minutes). Each group member should speak for roughly the same amount of time.
- Presentations should **not** need to involve slides, because you won't have a projector.
- You will give your presentation to your recitation instructor. If you would like to rehearse your presentation beforehand, the CI instructors will be available to watch your rehearsal and give you feedback.
- After you have finished your presentation, your instructor may ask you additional questions about your design.
- Your instructor will grade you on a check/check+/check- scale, and will take into account both your technical design and the quality of your presentation.
