

Dance Dance Revolution

Andrea Bolivar & Grace Quaratiello

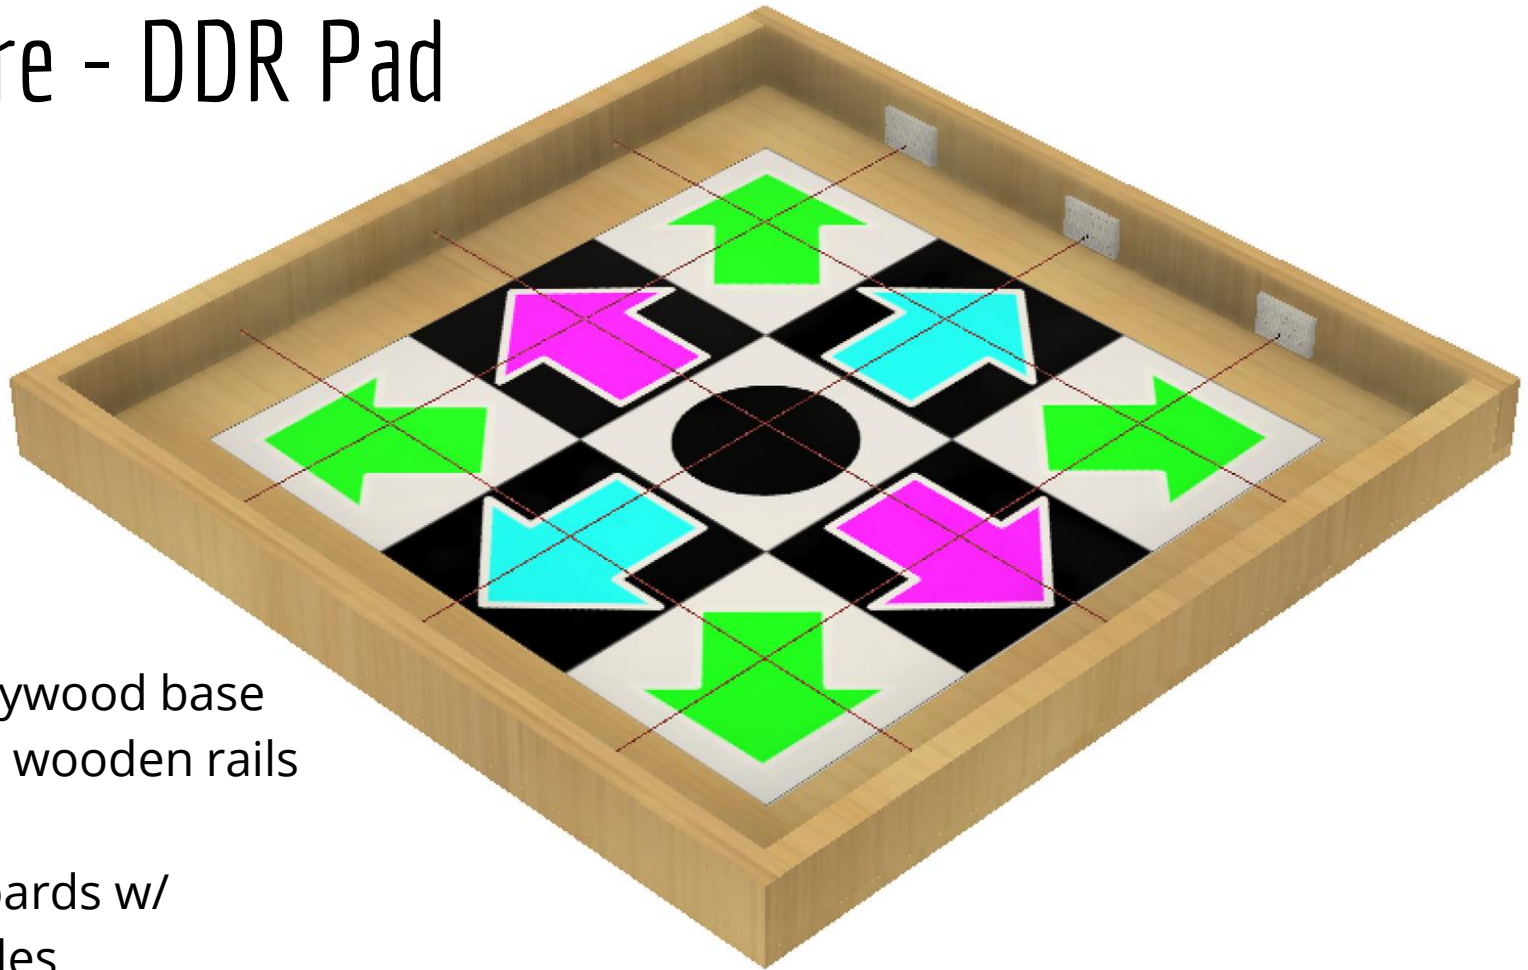

Overview

- DDR is an interactive dance game
- Points are received by stepping on arrows in time with choreography displayed on a screen.

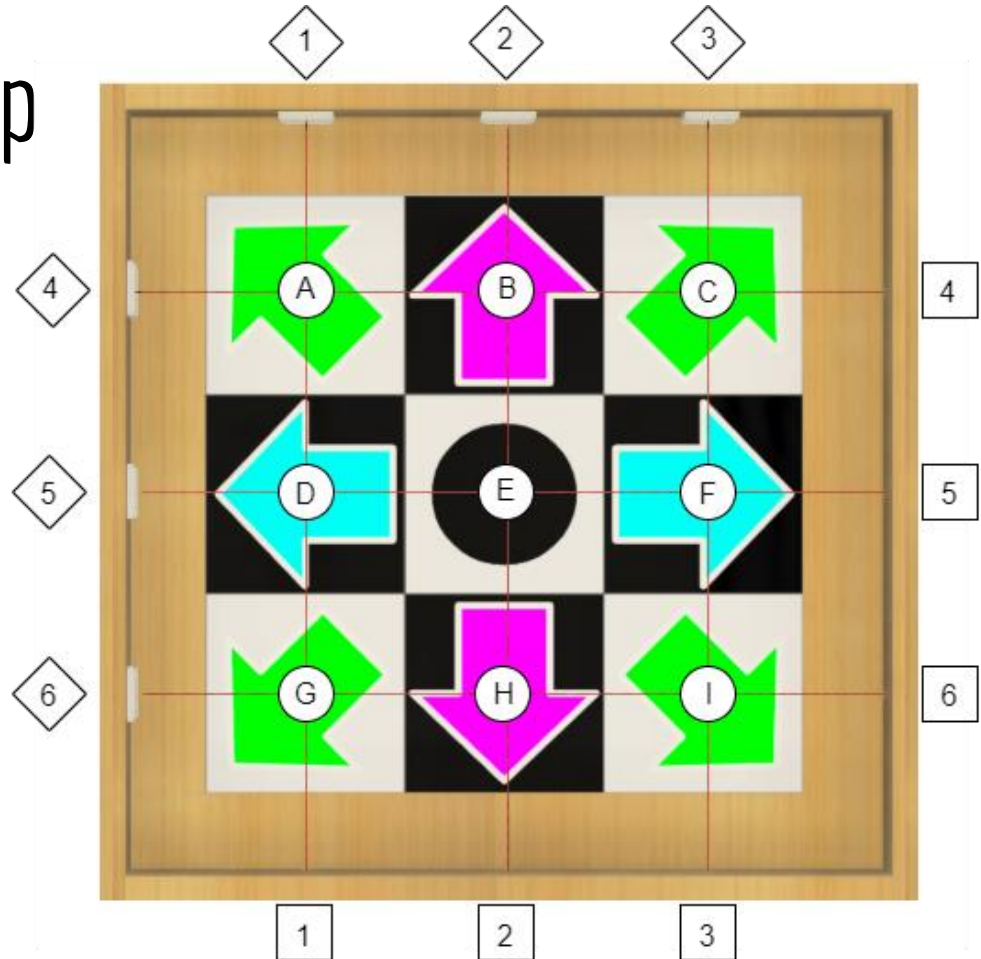

Hardware - DDR Pad

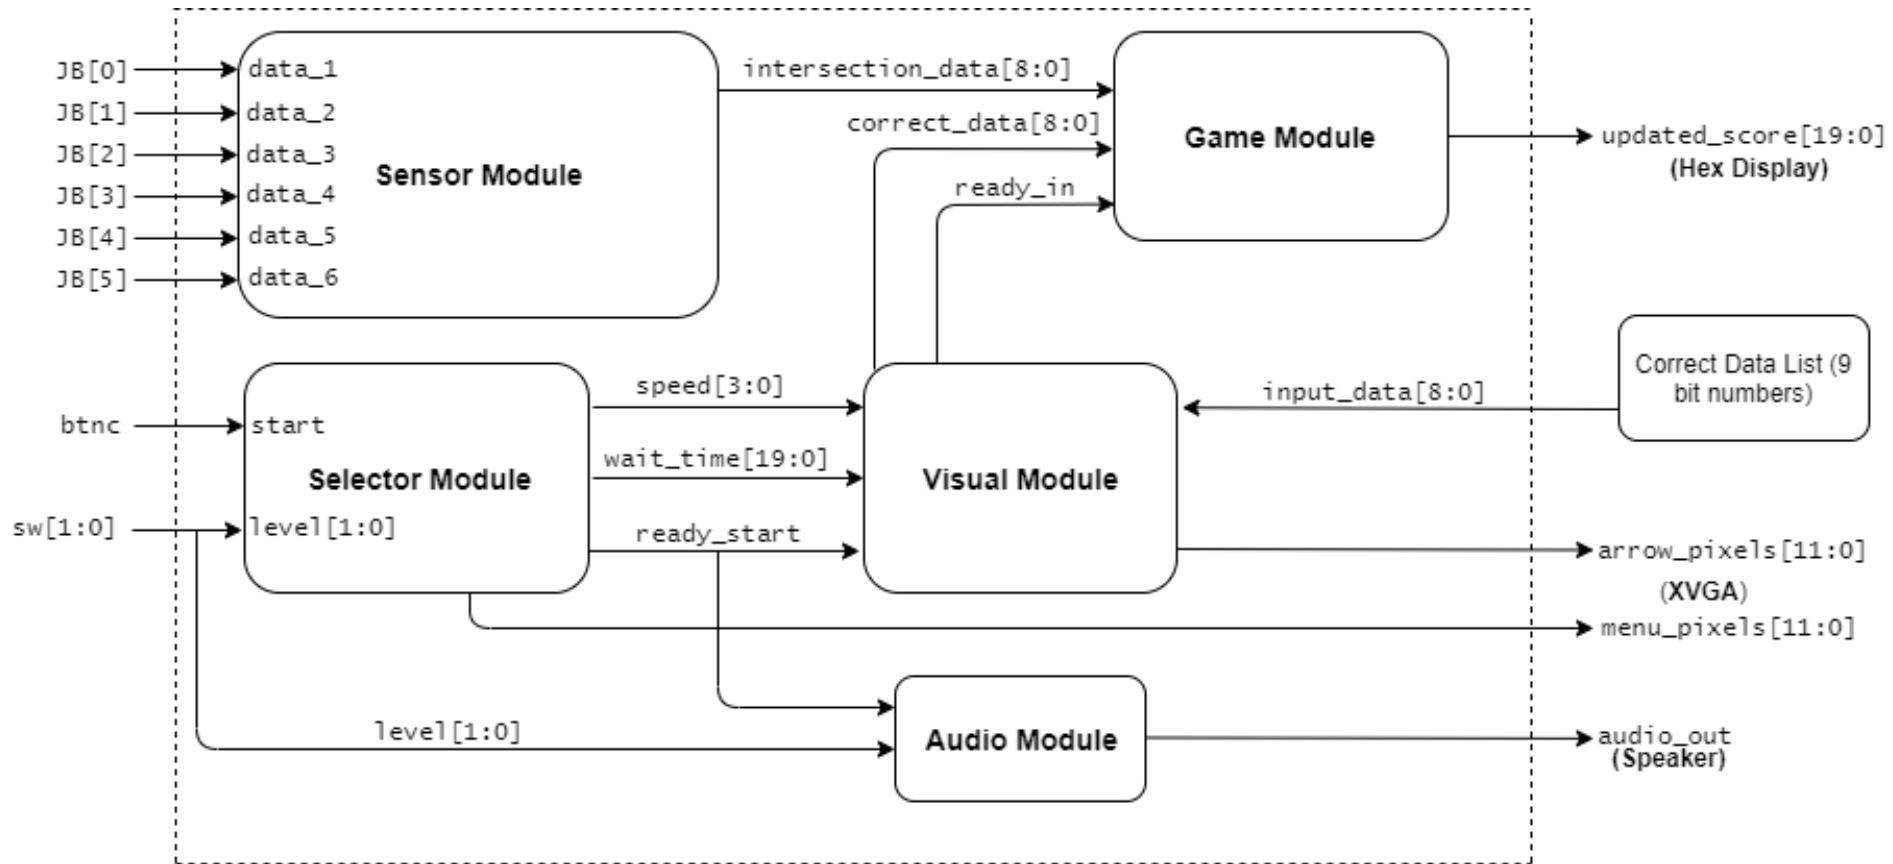

- 4ft x 4ft plywood base
- 4 2in x 4in wooden rails
- 6 lasers
- 6 breadboards w/
photodiodes

Laser/Photodiode Setup

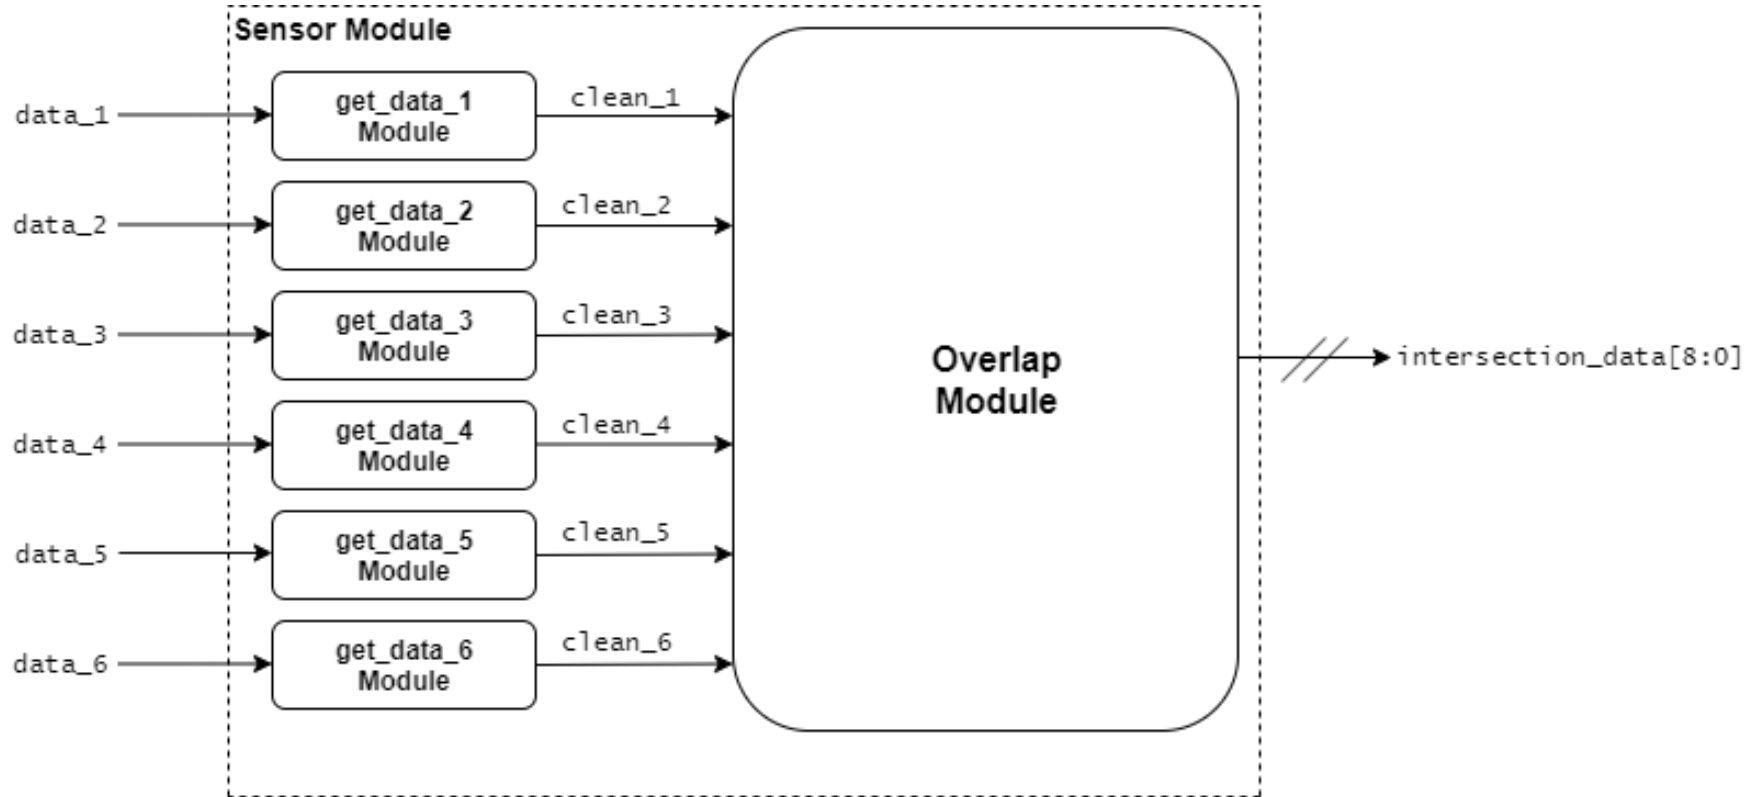

- 6-laser setup → 9 intersections
 - Intersection at center of square
- 6 photodiodes opposite lasers
 - Detect light
- `intersection_data` → 9 bit wire
 - 1 if foot in square, 0 otherwise for each intersection ABCDEFGHI

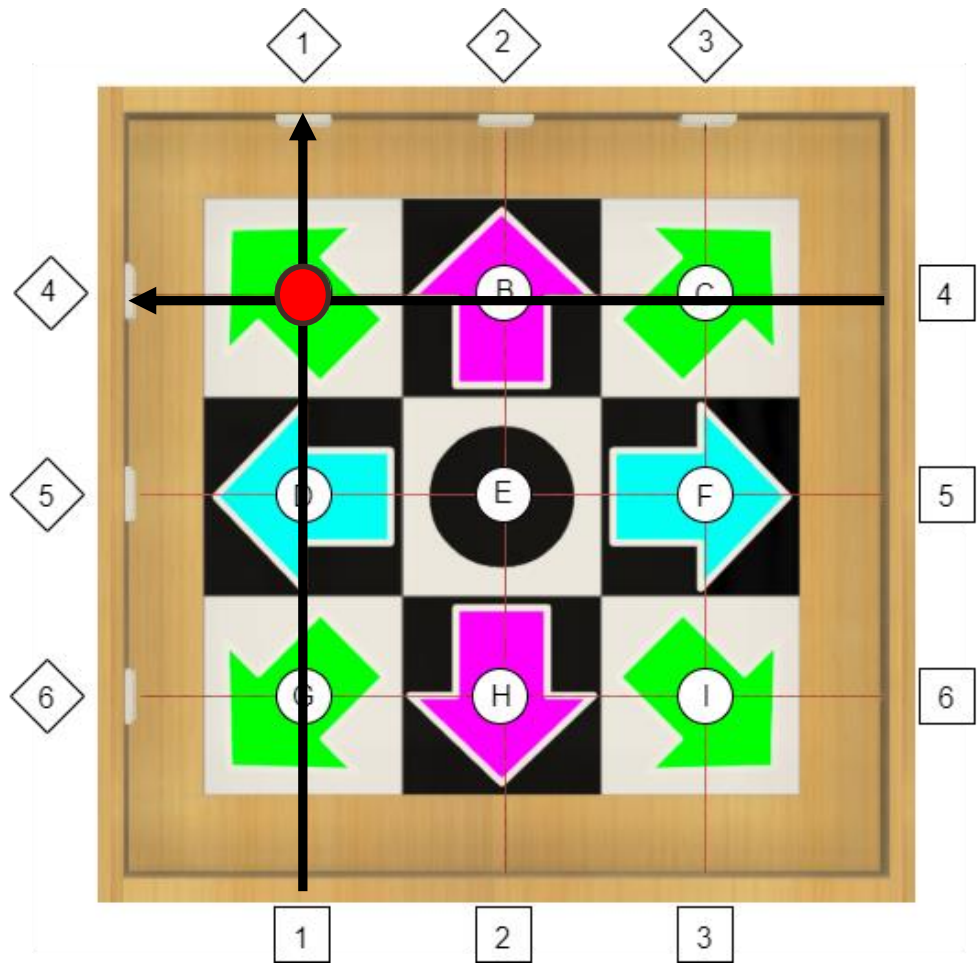

High-Level Overview

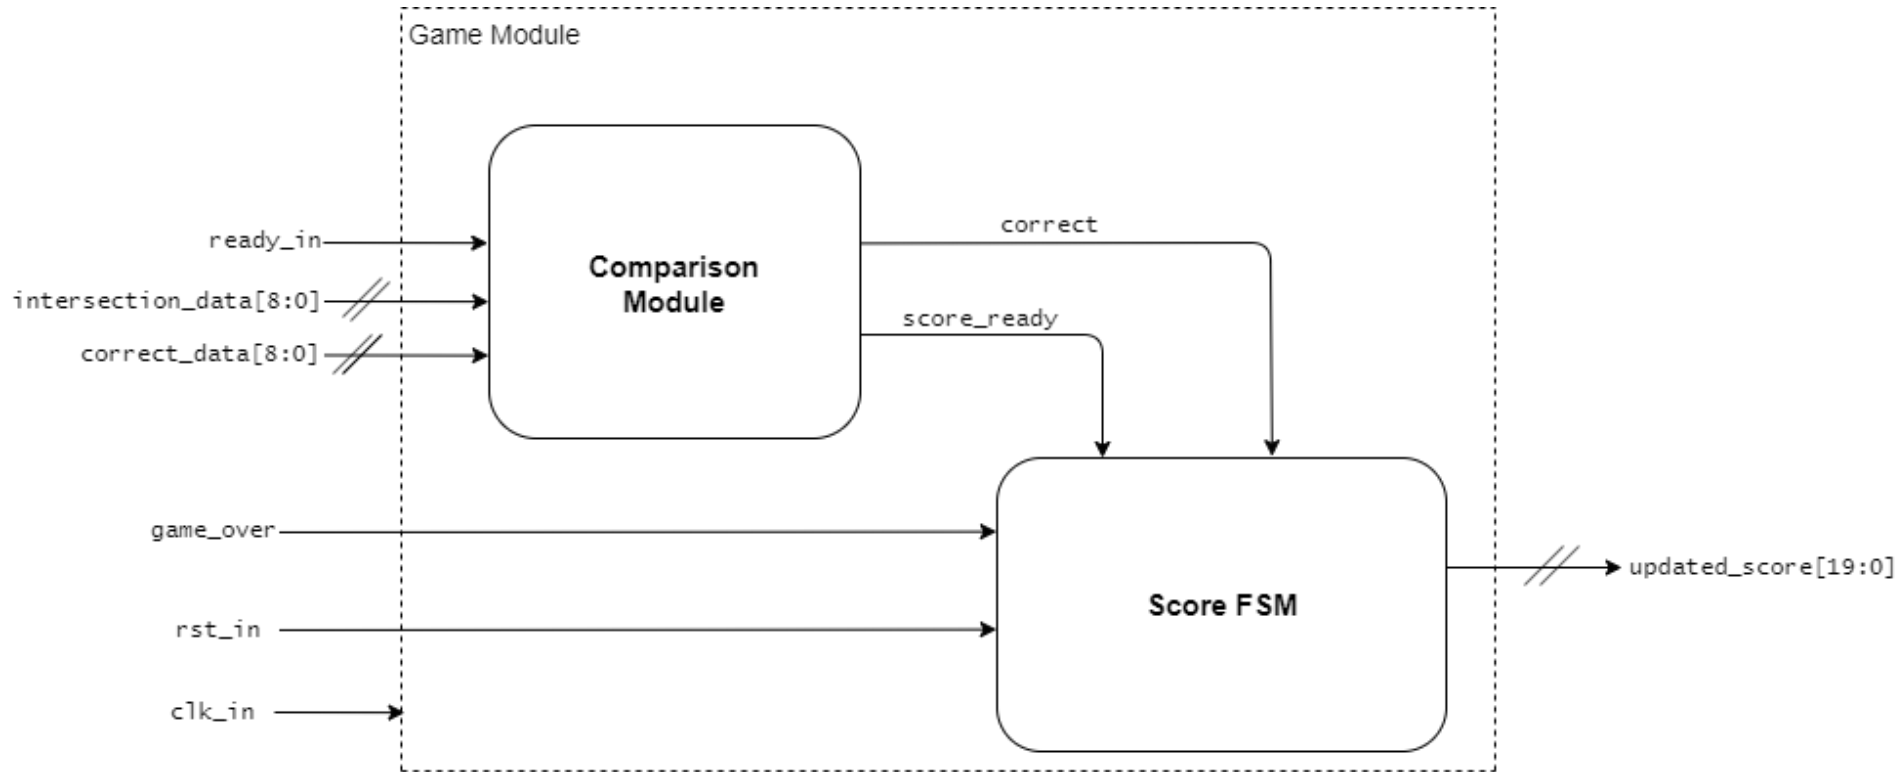

Sensor Module (Andrea)

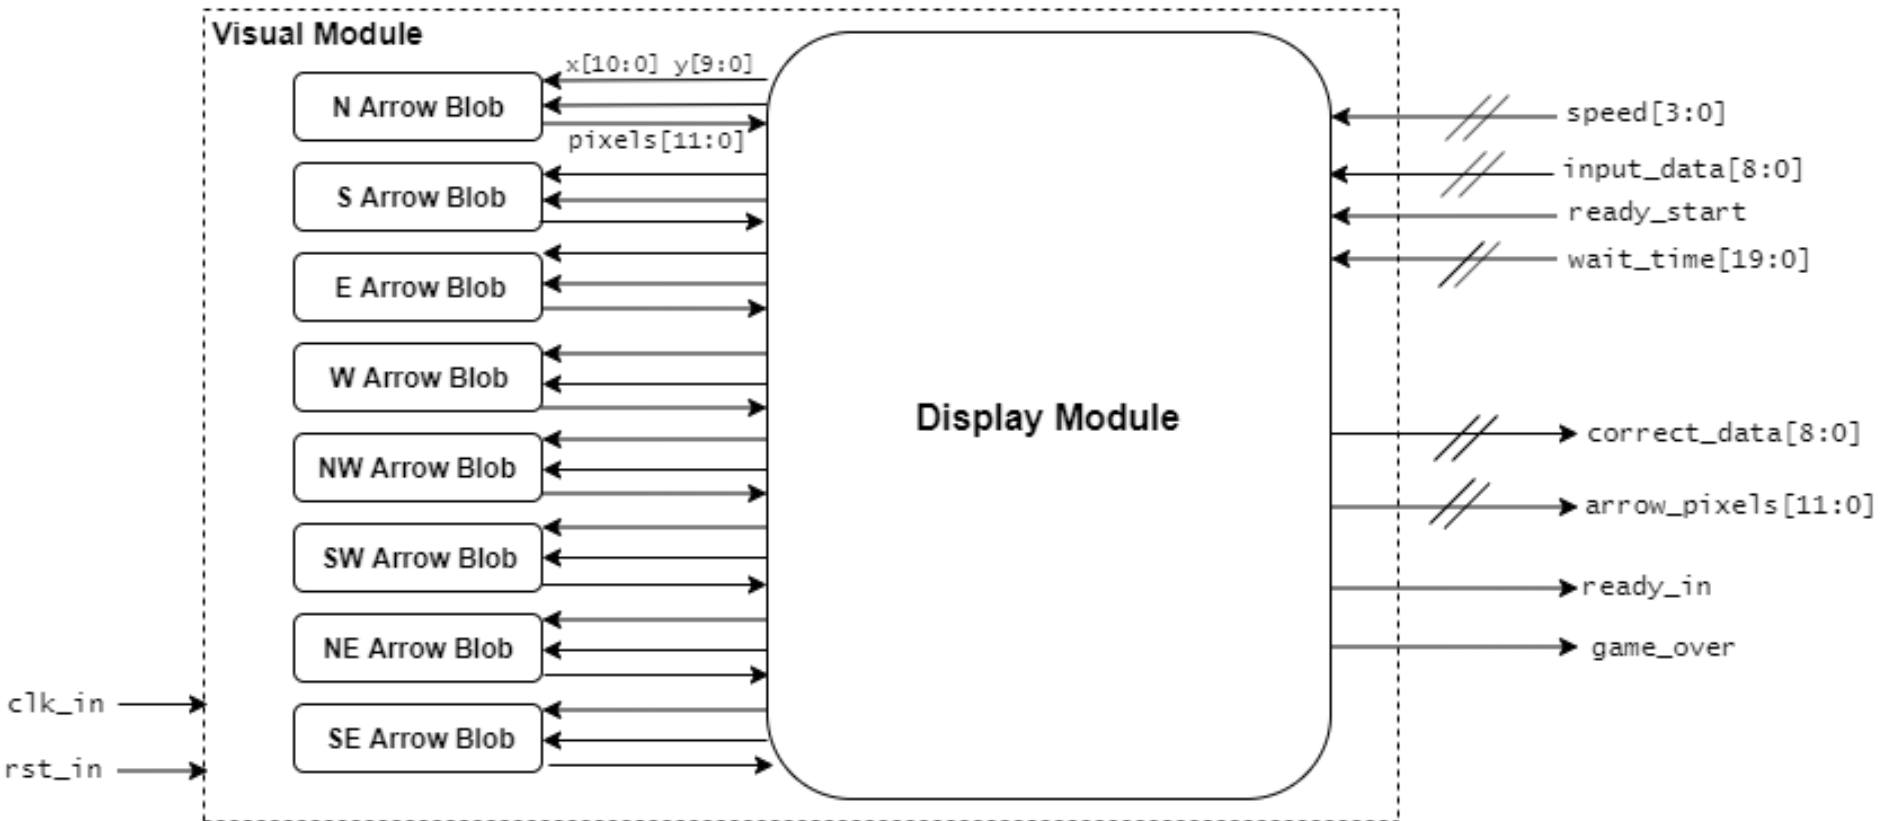

Game Module (Grace)

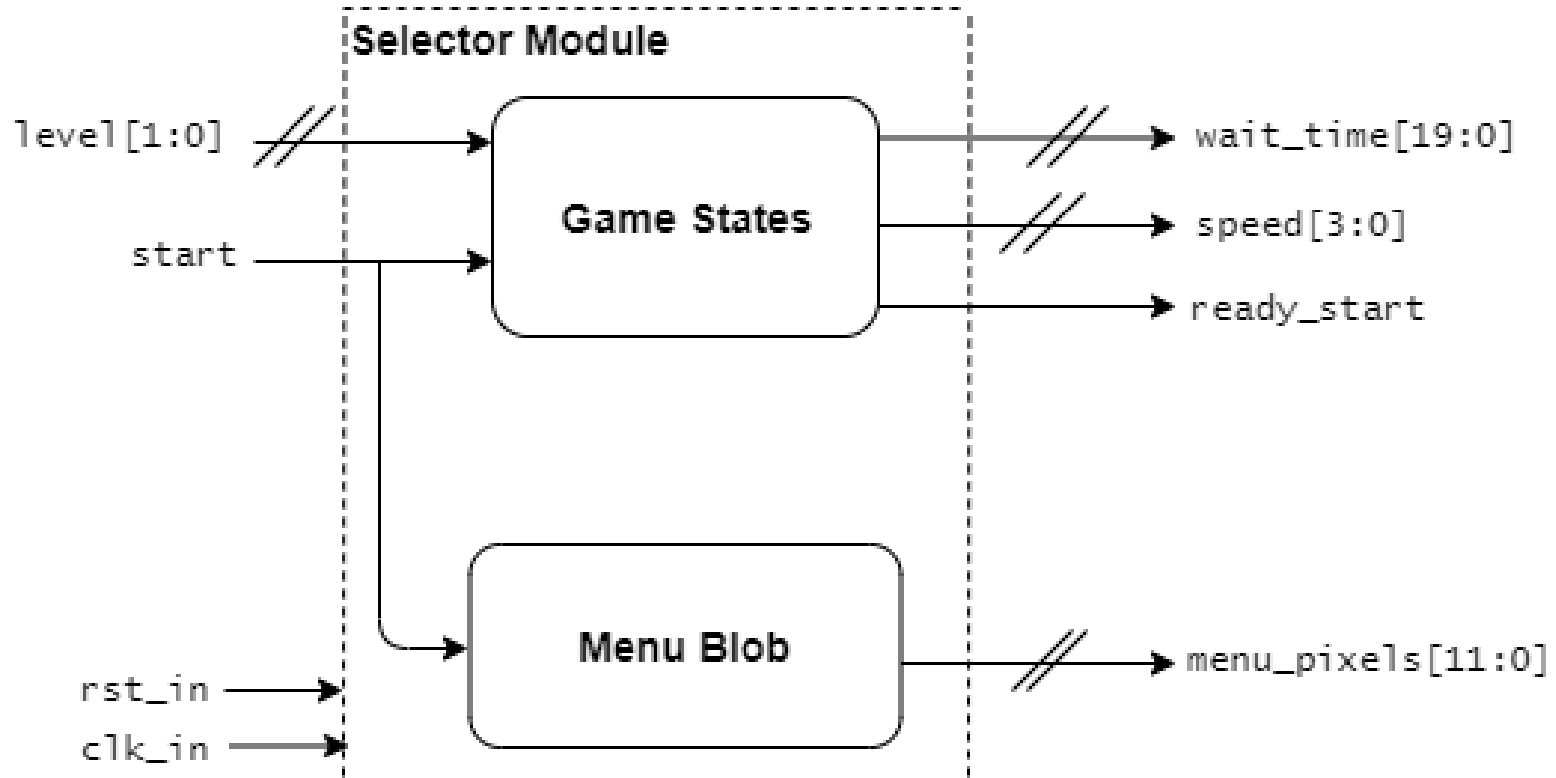

Visual Module (Andrea)

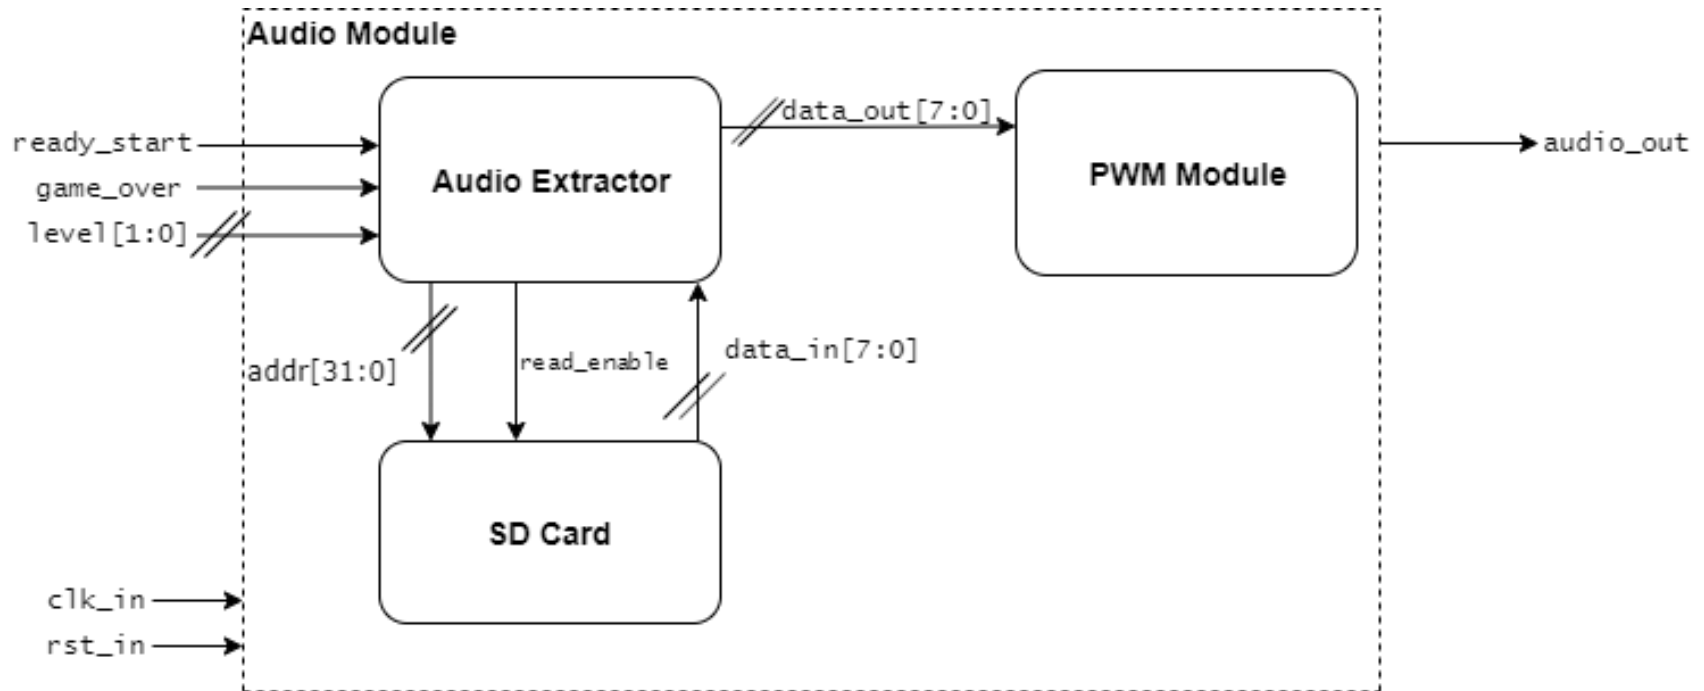

Monitor Setup

Selector Module (Grace)

Audio Module (Grace)

Goals

Commitment	Baseline Goals	Stretch Goals
<ul style="list-style-type: none">- Individual working components	<ul style="list-style-type: none">- Functional game with a start menu- Score will count up normally without complex logic or states.- 3 game levels determined by speed	<ul style="list-style-type: none">- Complex scoring FSM (streaks, bonuses, perfect vs. imperfect success)- More songs available for the player to choose from- Option to pause the game once started- Display the score on the monitor instead of the hex display.

Timeline

Date	Achievement
11/08	Build structure and test hardware
11/15	Complete and test sensor module and audio module
11/22	Complete and test game module, selector module, and visual module
11/26	System integration
12/6	Work toward stretch goals
