

Observed Migratory Anomalies of the Great Northern Shoveler

a publication of appreciation for Dennis Lindberg

by Dr. Kent Lundberg
Lecturer of Electrical Engineering
Massachusetts Institute of Technology

March 23, 2004

Figure 1: The great northern shoveler makes its home in California. However, on rare occasions, the mathematician duck has been observed getting lost on migratory travels. This specimen is clearly confused by the sight of snow.

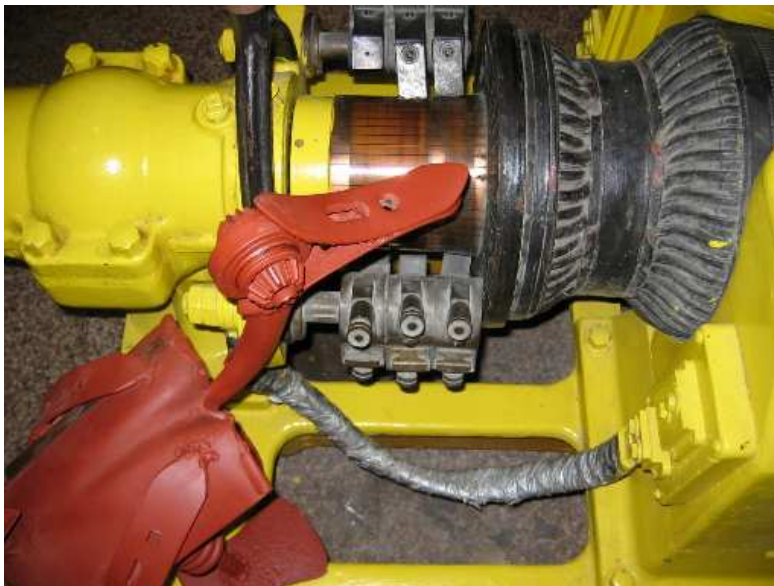

Figure 2: The mathematician duck has no natural fear of electrical machinery. This duck spent hours poking at this generator.

Figure 3: The mathematician duck is comfortable in the electrical engineering laboratory and is proficient with an oscilloscope . . .

Figure 4: . . .but often gets tangled in wires and cables.

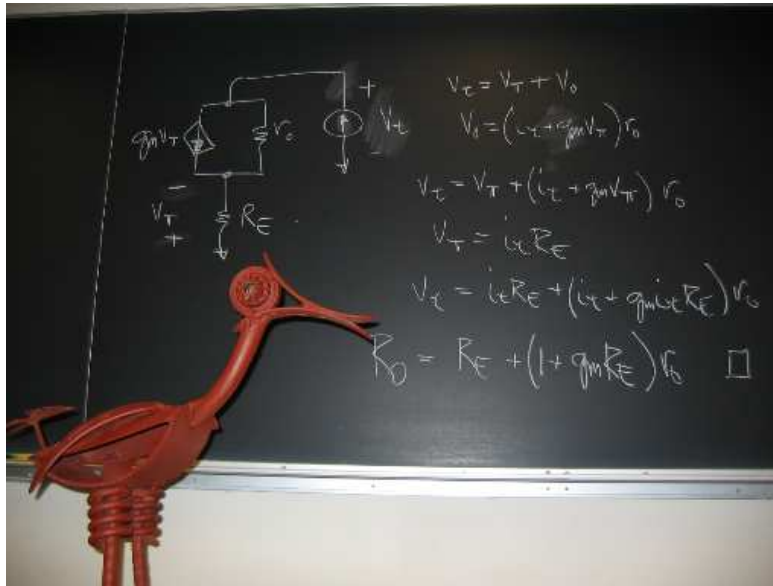

Figure 5: Left alone in a classroom, the mathematician duck is known to drone on and on and on and on ...

Figure 6: The mathematician duck consumes great quantities of chalk. Students often find the duck's behavior confusing and frightening.

Figure 7: The plumage of the mathematician duck is a natural camouflage among computers. This duck has a sore neck from long work days of pecking at the keyboard.

Figure 8: The mathematician duck is known to collect books to line its nest.
